BIDDING SOFT CLOSES AT 7 PM
Racehorse Style Close with Extended Bidding

www.olefarms.com

Kelly & Anna and Graham & Leslie Olson

OUR GOALS AT OLE FARMS

1. PROFIT:

Most of us would agree that the production of beef is a BUSINESS. We should never forget what the purpose of any business should be: PROFIT. If you are in the cow/calf business now and are not very profitable, NOW would be a good time to bail out or at least severely change your management practices.

2. SOIL HEALTH:

Soil health is paramount to the success of any farm or ranch. In North America soil health and organic matter have deteriorated on many operations since the land was settled. Proper livestock management can reverse this trend. Unfortunately, most grain farms have few options in restoring soil health. They are slowly mining their soils.

3. GRAZING MANAGEMENT:

At Ole Farms we use a rotational grazing system that improves plant and soil health. Cattle are moved every 3 days early in the grazing season to ensure that plants have an adequate recovery time. Winter grazing and feeding is managed to distribute manure and urine evenly across the land.

4. CATTLE TYPE:

It is not the role of the ranch to provide what the livestock need; rather it is the cow's job to produce what the ranch can provide. In order to improve our soils and be profitable, we need the right type of cow.

5. OLE FARMS COWS:

Phenotypically cows must be moderate and easy fleshing, with good feet and udders. She must calve on her own and maximize the profit per acre. The bigger the Frame Score the smaller the per acre profit. It seems that very few Purebred breeders understand this concept

6. FLEXIBILITY:

Flexibility in any operation is important. A cow's job is to produce what the land can provide. However Mother Nature sometimes has other ideas. Drought, floods and hail are all natural occurrences that can cause an operation grief. Some ranches use a yearling operation as a buffer for drought. Yearlings can be sold if pasture is in short supply. At Ole Farms we have been blessed with a reasonably predictable feed supply but occasionally not all goes according to plan. Our backup is our grain farm. About 15% of our land base is dedicated to grain production. Occasionally we have silaged our grain crops to supplement our roughage base for our cow herd. We use stubble fields for fall grazing and use canola straw to stretch the silage. Corn has become the most predictable and efficient feed source for us. We harvest earlage and graze the left over stover. Legume crops of Alfalfa and Clover are used in rotation also.

7. VOLUME:

We will calve more than 1500 cows again in 2026, 365 of them being heifers. We aggressively cull animals that do not fit our program. Our goal has always been to provide the right kind of seed stock in volume at reasonable prices.

8. Sharing in the Excitement of Agriculture:

We are continually investigating ways to improve and we are prepared to share our successes and failures with any of you.

Our door is always open ...

OLE FARMS

Kelly & Anna

Carl, Graham, Leslie & Ace

Kelly says that when speaking with cow/calf producers in the last few months about cattle prices the most often asked question has been, "How long is it going to last?" He responds: "I am not sure why they ask me but my answer always is: It will be good until we start saying that this is the New Norm." Prices are very good, if not fantastic, now but there is a lot of apprehension in the industry.

After years of mediocre prices producers just can't believe what is happening. It seems like older producers are thinking that it may not last long and are taking this opportunity to disperse. Younger producers and their banks are nervous of the capital requirements for expansion. As a result according to experts, increased heifer retention has either not started or has only seen a marginal increase. When heifer retention starts the beef supply will reduce and prices should rise or at least stabilize. We believe we have two or three really good years ahead, and advise that you should work to improve your cow herd now in both quality and quantity if your land base warrants it - but do it cautiously.

Now is a good time to disperse those unproductive cows at good value. Replace them with genetics that can forage on their own and wean a profitable calf every year and cause you less grief. We believe that a moderate framed cow (5 frame or less) will generate more profit per acre. She must be deep bodied and have the capacity to utilize low quality forages. Our cows must be easy fleshing, have good feet and udders and be able to graze through the snow. This type of cow and the production system you use must enhance soil quality. Everything we do as cattle producers is dependent on our soil. At Ole Farms we keep this in mind with every decision we make.

Fortunately Ole Farms experienced average production during the summer and fall of 2025, despite very dry conditions. We have had to modify our feeding program due to the drought causing a lack of pasture. We will not have enough winter grazing to last until March like normal so we started feeding earlier. We will be grazing corn stover into January. As cow/calf producers' conditions change, so must we.

Ole Farms has been blessed with an amazing group of employees in the past year. They understand our goals and appear eager to achieve them. Thank you each and every one - those who were temporary summer workers and those who have been here full time for a considerable time.

We are very happy with this year's offering of 194 bulls and a similar group of bred heifers. None of these have been pampered. The bulls were fed modestly last winter and grazed over the summer. We assure you that you can purchase with confidence. The bulls will not melt away when you get them home. One hundred and ninety four bulls is our largest offering yet, and of these 55% of them can be safely used on heifers or cows. The heifers are bred to calve easily and will make a great addition to your herd.

We, the Olson family, look forward to "... sharing in the excitement of Agriculture" with you. You are very welcome to drop in for a visit or call anytime.

How to Participate in the DLMS Farm Gate Timed Auction with Extended Bidding:

1. Visit dlms.ca and follow the link to the DLMS Farm Gate Timed Auction site at www.farmgatetimedauctions.ca, click the LOGIN/REGISTRATION button. First time users will select the REGISTER button from this page. Fill out the registration form to signup for a free user account and it allows you to select a username and password for use on all Farm Gate Timed auctions. This program will send you text and email messages whenever there is activity on your favorite lots or someone challenges your proxy bid and this is why you will be asked for both your current email and cell phone number. If you are a past participant in the Farm Gate Timed auctions simply enter your username and password to continue. This takes you to a list of both current and upcoming Farm Gate Auctions.
2. You can choose your favourite lots in this sale at this time and the program will allow you to open either all sale lots or just your favorite lots on your screen. Any time there is active bidding on a lot you have identified on your favorite list you will get a text and/or an email noting this activity.
3. The program allows you to place a proxy bid on any sale lot. This in fact protects your interest in any lot of interest for you to a specified dollar value you set, when you may not be able to give 100% attention to the sale. If the lot has a \$2000 bid on it and you place a proxy bid of \$3500 into the system, the computer will bid \$2100 for you but if some one else bids \$2200, the computer will again bid for you, this time at \$2300. The system will look after your interest to a maximum of \$3500. If another bidder is on at \$3600, your proxy will no longer be effective and you will no longer have the winning bid on this lot without once again logging in and bidding again or moving your attention to a second lot of interest.
4. At closing time of the sale the entire sale will extend bidding if a bid is placed on any lot in the sale. Any bid received after close time will extend the sale by the time listed on each sale. In Most cases the time gets shorter the longer in to extended bidding the sale is. When no bidding occurs for the extended time the computer will declare the sale finished.
5. Following the sale the Owner or Sale Manager will invoice all buyers in the sale, please contact the seller with questions or to arrange delivery, pick up or shipping of your purchases.

FAQ:

WHAT IS RACEHORSE STYLE SALE CLOSE?

Racehorse style sale close is when the entire sale stays open in extended bidding.

This type of sale allows you as the bidder to change to a different lot within the same sale if the bidding has gone in to extended bidding.

HOW WILL EXTENDED BIDDING WORK?

When we get to the close out end time the clock for close extends with any bid placed with less than 5 minutes on the clock.

This type of extended bidding turns the end time to more of a soft time.

Extended bidding allows bidders to compete in lots like a real auction and give all bidders the same time to make a decision.

Always follow the clock to see how much time remains in the sale you are interested in.

For more info and assistance with bidding contact
any of the sale contacts listed on the DLMS website www.dlms.ca
DLMS Farm Gate Timed Auctions ~ Mark Shologan Ph: 780-699-5082

Herd Health Program

- Zoetis Animal Health Program
- All cattle have been vaccinated, following Zoetis Animal health protocols
- P.I. (Persistently Infected BVD) - all sale bulls are guaranteed BVD/ P.I. infected free animals
- All bulls sell with a certified semen test prior to delivery
- All bulls will be Fusoguard Foot Rot vaccinated prior to delivery

Calving Ease

Star ratings are the subjective estimate of these young bulls' calving ease

CALVING EASE ★★★★★

Likely to have a high level of calving ease based on dam and sire history, actual birth weight and EPD of birth weight

CALVING EASE ★★★

Should be comfortable for use on heifers of the same breed

CALVING EASE ★★

Bull should be used on cows

CALVING EASE ★

Bull should only be used on cows - expect higher birth weights

CATALOG ORDER

We have organized the catalog primarily into sire groupings and then for your convenience by calving ease to allow for easy transition between lots during the sale closing period.

Size Matters

Extensive research by the University of Oklahoma of rangeland cow herds showed that for every 100 lbs a cow is heavier she will wean only 6 more pounds of calf. A cow weight of 100 lbs will need the equivalent of 1.67 lbs of hay or its pasture equivalent per day more. Over 365 days that equates to 610 lbs of dry matter forage for the year. At \$140 per ton that is \$42.70. On a \$.20 slide the extra 6 lbs of calf is worth about \$5.78. Subtract your extra cost of \$42.70 from your revenue of \$5.78 each extra 100 lbs your cow weighs costs you \$36.92 per head per year.

We have been doing foot and udder scores on our entire cow herd since 2014. It is no small feat I assure you.

The extra effort of all these records has helped us identify issues in our bloodlines as well as issues in new bulls used.

Bravo combines calving ease and performance in a moderate package. He is in the top 1% for CE and 2% for docility. Bravo has worked well in our program. We believe that his high back fat contributes to easy fleshing and performance in his offspring. He has sired 260 calves in our herd and there are 22 sons or grandsons in this sale.

Note: our semen inventory is getting low so sons will not be as plentiful in coming years.

Once again a Duff Honcho grandson has risen to the top! This calving ease bull who randomly got named Midas will perhaps be the King Midas from Greek Mythology who had the ability to turn everything he touched into gold. We have no illusions that Midas 889M will do that but we believe that he will positively impact any herd as he is thick and has loads of capacity. His mother 767F, has raised 6 consecutive calves with an average BW of 69 lbs. and a 205 weaning index of 103.6. There is lots of potential here.

A son of 767F sold to the Erbs of Wilderness Ranch in Ontario in the 2024 sale. Mark and John Erb have been buying the top end of our bulls for over 20 years.

We have used 27C for about 12 years out of OCC Emblazon 854E and the Legend Dam from DDA Melisa 824. If you look at our pedigrees you will see that 27C has had a large impact. Here we have a calving ease and very maternal pedigree.

Ole Bandit 808G

At Ole Farms we are in the process of eliminating cattle access to water bodies. We have several miles of water pipelines to bring water to various paddocks.

We have most dugouts fenced and have recently fenced out a half mile of lake frontage. Clean water is better for the cattle and the environment.

At Ole Farms we use our best land to produce high value crops like corn and canola. We graze corn and corn stover and use canola straw as feed and bedding.

We grow Red Clover on our low pH land. This crop maximizes production on low fertility land and out yields any other forage used here.

*At Ole Farms when cows are fed it is always in
the field where they will spread nutrients around.
We use portable bottomless feed bunks that are easily moved.*

Lessons of the Soil

Early in the spring of 1911 Alfred Theodore Olson tripped over a burnt log. Already wet to his knees from wading through pools of water he was tired, but anxious. For the past two weeks he had been searching for a homestead Southwest of Athabasca. He had just turned 27 and had heard of the Homestead Act, where settlers could acquire 160 acres.

The good land five miles Southwest of Athabasca had already been taken. He was now approaching a quarter he had traversed a few days before, and he needed to see it again. In his mind it was perfect: it had a small wet area, perhaps an acre in the Northwest corner and a spring in the Southeast corner. He had walked across it previously, climbing over fallen trees and fighting through underbrush. The land was high and flat and unlike the quarter to the south, it had few rocks and the quarters to the North, West and East were wet and mostly muskeg. At this point he was not a farmer, but he had heard that heavy trees meant good soil. Big timber would make developing the land more difficult, but in the end, there would be benefits.

Settling on a fallen tree in the middle of his chosen land to rest and think, little did he know that he would survive four years of Trench Warfare in the Great War and after years of hard work and many successes that one day, 47 years later this land would take his life; his last breath would be here on the NW 23 65 23 W4. He probably did not imagine that 114 years later his descendants would still be farming this land. He would have been proud, I am sure, to know that over one hundred years later his descendants who have been farming 100 quarters would rate this one the best.

Alfred Olson was my grandfather and although I was only 4 years old when he passed he had tremendous impact on me and our current farm.

**OLE
FARMS**

OLE FARMS GRAZING MANAGEMENT

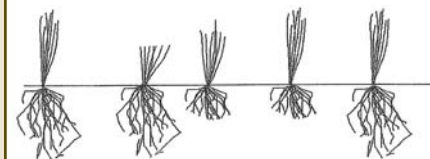

- Rest Period - In our area we need approximately 35 days of rest in the May, June and July period. (That will vary somewhat with conditions.) So if we start grazing May 15 we can't go back to that paddock until June 20. Our goal would be to have all paddocks grazed in 35 days.
- Graze Period - When grass is actively growing cattle will start re-grazing after 3 days. Therefore, we like to stay 3 days or less in a paddock.
- Consequently, if your rest period is 35 days and your graze period is 3 days, you need a minimum of 13 paddocks to satisfy both the resting period and the grazing goals.
- By following these rest and graze rules we can keep our forage in a vegetative state, preventing grass from heading out or going into a reproductive state where quality is diminished.
- Later in the season the rest and graze periods can be longer.

OLE FARMS GRAZING GOAL

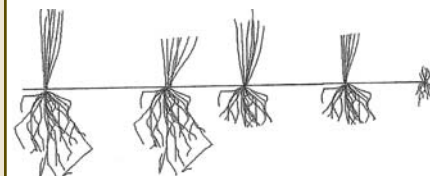

Our goal is to have plants like you see in Diagram A.

Diagram B occurs under continuous grazing, when animals are allowed a second bite of a plant or if the rest period is not long enough.

A - PROPER GRAZING

B - OVERGRAZING

EIGHT STEPS TO LONG TERM PROFITABILITY

1. A live calf - dead calves never make money.
 - High calving ease bulls means lower birth weight partially due to a shorter gestation: 7 - 10 days
 - This shorter gestation gives cows more time to rebreed and the calves will catch up to long gestation calves by weaning
2. Match cow numbers to available feed resources but allow for years when grass growth is stressed.
3. Match cows to your environment. Moderate framed cows that are easy fleshing and have less milk will almost always be more profitable. Easy fleshing cows generally have more backfat. Think of pounds of beef produced per acre, not per cow.
4. Manage your pastures to allow for sufficient rest periods after each controlled grazing. Soil health and long-term profitability will improve.
5. Maximize the number of days you can graze your cows in the winter. Parking your tractor contributes to cost savings.
6. Have a good marketing plan. Sell calves, feeders or cull cows when prices are seasonably higher, rather than when it is convenient.
7. If you are not using AgriStability I suggest you enroll. The current prices we are enjoying will not last forever - this is a great time to build great reference margins.
8. And MOST IMPORTANTLY - BUY MORE BULLS! LOL

A092 is a bull we bought at Mushrush Red Angus in 2014. He will be 13 years old this spring and is still sound, has solid feet and breeding well. He sire is the well known Julian 84S. Because of his longevity we are using A092 in our AI program after a number of successful years of using him as a cleanup bull. We have a good solid bull here.

Picking 494M out of a strong set of J832 bulls was not easy.

This bull is phenotypically very solid.

He has a 43 cm scrotal, will calve easily and is in the top 15% for WW and 20% for YW.

His dam 780H has had 4 calves with a very low BW of 65 lbs.
 and a 205 day weaning index of 115.

A bull calf in last year's sale went to Twisted T Cattle Co.

I was recently in Nebraska and had the opportunity to see Lady IDA of Hague 1624, the dam of 001. I liked her as a 6 year old when I bought 001 as the top seller at the Hague Angus sale in 2021. As a 10 year old I like her even better. As a result I purchased another of her sons this year, out of a Rito 707 son. Having said all that we are very confident in what 001 can offer. We have recently collected 1500 straws and intend to use this bull extensively in the future. 135 progeny have been born so far. There are 5 sons in the sale. 001 is an easy fleshing, calving ease female maker.

 RED FLYING K LINETT 41Z

BW: 78 lbs.

EPDs: CED: +9.0 BW: -0.1 WW: +58 YW: +97 MCE: +5.0 MILK: +35 SC: +0.88

In the off season when we check on our 80+ herd bull battery 231G always stands out. He is in the top 9% for CE, top 8 and 10% respectively for WW and YW, and has plenty of back fat. 231G has 300 progeny. He is a good solid, all around bull with 13 sons in our sale.

COMMERCIAL BRED HEIFERS

Heifers are bred to calve mid April with exposure dates from July 10 to September 9. Red Heifers exposed to Red Angus Bulls. Black Heifers exposed to Black Angus Bulls.

All bulls used are easy calving. In addition to our own commercial herd, heifers were obtained from Elsen Ranch, Alcott Creek Cattle Company, and Ryan and Shirley Clearwater, all long term Ole Farms Bull Sale customers.

Bulls and bred females will be in pens on display beginning Friday and going through Monday.

You are encouraged to come ahead of time to view our offering.

Thank You!

WHY TO BREED YOUR OWN HEIFERS

(And What Bull to Buy)

Fertility and longevity are arguably the two most important traits in a profitable cow herd.

When selecting a bull, keep in mind the maternal characteristics in the genetics of the bull you purchase. That will be very important long term. Some producers choose to buy their replacements rather than breed their own heifers. Unless they are familiar with the program these heifers come from, they won't quite know what they are getting. If the industry is in an expansion phase, these heifers may get very expensive. Assuming that you want to improve your cowherd, I suggest that you select bulls from strong maternal families to use on heifers you've raised.

Imagine that you have 100 cows, and you raise 90 calves. This gives you 45 heifers to select replacements from. If you keep your cows until age 10, you need 13 heifers to replace them. If a couple die over the year, you'll need 15. If you decide you need to replace 5% more for various reasons, you will need 20 replacements each year. In order to improve your herd, you may select heifers from the top half of your herd. This means that if you get 90% bred in a short breeding season, you have the 20 you need. Since you need half of your heifers, you need to use mostly bulls with good maternal traits, and very few terminal sires.

We have on offer over 100 bulls that are calving ease sires. Whether used on heifers or cows, Ole Farms has the genetics needed to lead to long term improvements in your herd.

EPD Definitions

EPDs are an estimation of an animal's breeding value based on its pedigree and performance. EPDs indicate the average performance expected from an animal's progeny in comparison to another animal or to the breed average. They allow for fair comparison of animals' genetics across herds, regardless of environment and management differences.

P = Parental Average EPDs: These are the most basic and least accurate EPDs. They are the best guideline available when calves are first reported and there is no performance data on them yet. Parental Average EPDs are indicated by a P for accuracy and are an average of the dam and sire's EPDs. If a calf has only one parent with EPDs, its Parental Average EPDs will be only half of its one parent's EPDs.

P+ = Interim EPDs: These EPDs utilize the Parental Average EPD information on the calf plus any performance data on file and its ratio amongst its contemporary group. Interim EPDs are indicated by a P+ for accuracy and have a higher accuracy than a Parental Average EPD as they also include some performance data.

% = National EPDs: Calculated in the National Cattle Evaluations (NCEs), these EPDs are the most accurate prediction of breeding value or genetic merit that can be determined from pedigree and performance data submitted. National EPDs are published with numerical accuracies that reflect the quantity and quality of data used in its calculation.

Growth EPDs

BW = Birth Weight: Expressed in lbs, predicts on average how much heavier or lighter than the breed average an animal's calves will be. If the breed average is 3 and an Angus animal has a BW EPD of 5 then on average this animal's calves will be 2 lbs heavier than the breed average.

WW = Weaning Weight: Expressed in lbs, predicts comparative progeny weight at 205 days of age. This EPD reflects pre-weaning growth potential that an animal is expected to contribute to its calves.

YW = Yearling Weight: Expressed in lbs, predicts the differences in progeny performance at 365 days. The YW EPD reflects the animal's calves' potential for post-weaning growth.

Fertility Trait EPDs

Milk = Milk: Expressed in lbs. of calf weaned, this is a prediction of an animal's daughter's milking ability.

SC = Scrotal Circumference: This EPD predicts the average scrotal circumference for an animal's sons. Scrotal circumference is used to gauge a bull's fertility.

CED = Calving Ease Direct: Predicts the percentage of unassisted birthings expected from an animal's calves. This EPD reflects a combination of gestational growth and a calf's conformation. The higher the CED EPD, the more likely it is that the animal's calves will be born without assistance.

MCE = Maternal Calving Ease: Predicts the percentage of unassisted births an animal's daughters will have with their first calves. This is a reflection of daughters' pelvic shape and level of hormonal reactions and stamina during labour. The higher the MCE EPD, the more likely it is that the animal's daughters will give birth without assistance.

Terms & Conditions

CATTLE INSPECTION: All carry permanent identity tags, corresponding to Sale Lot Numbers. All shall be available for inspection prior to sale.

BREEDING GUARANTEE: All cattle are sound and sold with a responsible breeder guarantee of satisfaction. In the event of any unlikely dispute, the regular terms and conditions, standard with the Canadian Aberdeen Angus Association shall apply.

MAIL BIDS: May be entrusted in complete confidence to any of the Sale Staff listed.

INSURANCE: Ownership risk to purchaser commences when the Auctioneer's hammer falls. Livestock coverage will be available at the clerk's desk from the appointed representatives on sale day.

TERMS OF SALE: Cash or cheque at par, payable to Clerks of the Sale on Sale Day. No release will be given until satisfactory settlement has been made. We reserve the right to withhold animals from shipment for whom payments have not been received prior to departure times.

ALL PERSONS who attend the Sale do so at their own risk, and the Owners, Sale Management and Sale Staff assume no liability, legal or otherwise, for property loss or for any accidents that may occur.

GENETIC EVALUATION ANGUS BREED AVERAGES

To evaluate an animal using EPDs it should be compared to the breed average. This is not zero (0) for any trait, rather, it is an average of all the values for animals of that category in the breed, and changes every evaluation. EPD breed averages are calculated for three categories: non parents under 2 years of age, active dams, and active sires.

Average Black Angus EPDs / Red Angus EPDs for all CALVES born in 2025

EPDs:	CED: +3.3	BW: +2.0	WW: +56	YW: +99	MCE: +6.4	MILK: +24	SC: +0.89
EPDs:	CED: +2.3	BW: +1.3	WW: +44	YW: +76	MCE: +5.2	MILK: +25	SC: +0.79

RC = RED CARRIER
