Misty Ridge – Herd Health Program

Barr-North Veterinary services has been providing herd health services for Misty Ridge Dairy for the past five years. Herd health checks were performed weekly at the dairy and included fresh checks, pregnancy diagnosis, as well as pre-breeding checks. The cows were bred using various timed AI protocols as well as natural heat detection. Cows were started on ovsynch programs after a voluntary waiting period of 60 days. The dairy recorded all information using Dairy Comp 305 and has excellent records for all cows.

Young stocks were all vaccinated with modified live vaccine a minimum of two times prior to breeding. Lactating cows were vaccinated with CattleMaster a killed vaccine annually. Dry cows were blanket treated using Novo-Dry plus and some were also given Jvac depending on the time of year the cow was to freshen.
